PRESENTATION

Doctors without Melena: Avoiding an ulcer yourself when managing massive upper GI bleeds

DESCRIPTION

The evaluation and acute management of hemodynamically unstable, life-threatening upper GI bleeds in the emergency department.

OBJECTIVES & OUTCOMES

- Identifying patients with potentially life-threatening GI bleeds
- Acute management of patients with acute upper GI bleed
- Establishing access in decompensating GI bleed patients
- Massive transfusion in GI bleeds
- Acute medication management in GI bleeds
- Intubating decompensation upper GI bleed patients
- Blakemore tube placement
