

Dr. Bhakti Hansoti is an Associate Professor and clinician-scientist in the Department of Emergency Medicine at the Johns Hopkins University School of Medicine, with joint appointments in the Division of Infectious Diseases and the Department of International Health at the Johns Hopkins Bloomberg School of Public Health. Her work focuses on strengthening emergency care systems and expanding the role of emergency departments in addressing major public health challenges.

Dr. Hansoti's research lies at the intersection of Emergency Medicine, Addiction Medicine, and HIV, with a particular focus on applying implementation science to improve prevention, treatment, and linkage-to-care services for vulnerable populations accessing emergency departments. She has led numerous implementation science-driven studies both in the United States and internationally.

Internationally, she serves as Principal Investigator of a multicenter NIH-funded clinical trial evaluating emergency department-based HIV service delivery in South Africa and has contributed to large regional initiatives focused on strengthening the HIV care continuum in West Africa. Domestically, her work focuses on innovative emergency department-based programs for HIV prevention, rapid treatment initiation, and substance use disorder care. She currently serves as the emergency department and implementation science lead for the Baltimore Comprehensive Overdose Response to End the Epidemic (BCORE) program, a \$10 million initiative aimed at expanding peer-led medication for opioid use disorder and strengthening community linkage to care.
